

GOLD SERIES X-FLO GOLD CONE FILTER CARTRIDGE

Filter cartridges are the heart of any dust collector and play a key role on how efficient an extraction system will work. For our Gold Series X-Flo system we include the Gold Cone technology with an inner cone which increases the overall amount of usable filter surface of the cartridge and enhances pulse cleaning. Cartridges are available in both HemiPleat and Dura-Pleat media ranges.

ADVANTAGES

- Low pressure drop
- Extended filter life
- Most downward facing media available
- Filter for industrial dust collectors

Application: Suitable for many industrial processes like metal fabrication (welding, blasting, laser & plasma cutting, powder paint coating), food processing, pharmaceutical and chemical industry

Structure: Galvanised end caps and internal support

Gasket: Foam in place polyurethane or synthetic rubber

Sealant: Polyurethane

Temperature: 71° C for HemiPleat, 93° C for Dura-Pleat

Part number	HemiPleat model	Media type	Filter area m ²	DIN EN60335-2-69 (Dust Class)
